

Seeding QDArchive Project Using Zenodo and Harvard Dataverse Repositories

Shubhangi More (23137504)

Professorship for Open-Source Software, Friedrich-Alexander-Universität Erlangen-Nürnberg

Overview

This report summarises the distribution of qualitative data (QD) and qualitative data analysis (QDA) projects identified from two repositories: Zenodo and Harvard Dataverse. The histograms, rank-ordered tables, and comments below are reproduced directly from the classification pipeline's own per-repository PDF outputs (23137504-sq26-classification-report-zenodo.pdf and 23137504-sq26-classification-report-harvard-dataverse.pdf), not re-authored, so this single combined document stays consistent with those submitted artifacts.

Both repositories were queried through their public APIs for records carrying QDA-specific file types (e.g. .qdp, .nvp, .mx24) or common primary research-data formats (e.g. .csv, .pdf, .docx). Every project that passed this file-type check was classified against the ISIC Rev.5 taxonomy using sentence-transformer embeddings, matching each project's title, description and keywords to the closest-fitting ISIC division by cosine similarity.

Total Number of Distributions Reported

Repository	QDA_PROJECT Count	QD_PROJECT Count
Zenodo	6	16
Harvard Dataverse	25	171

Table 1: Breakdown of QDA and QD project distributions by repository.

1. Repository: Zenodo

a. Histogram of Primary Classes Identified

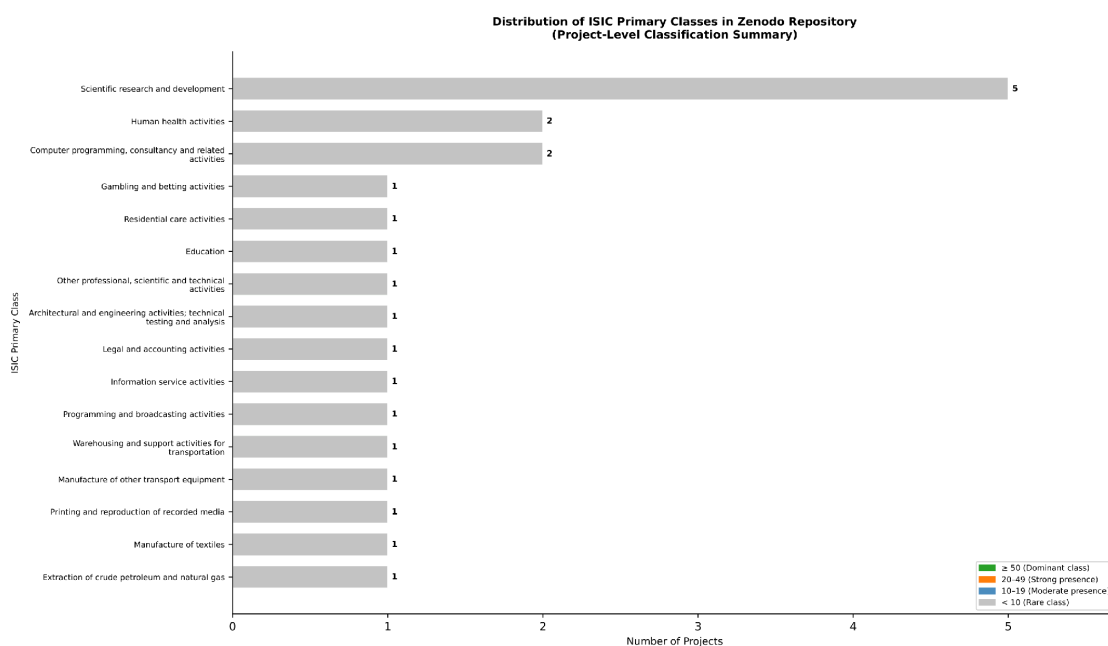

Figure 1: Histogram of Primary ISIC Classes in Zenodo Repository

b. Rank-Ordered List of Classes

Rank-Ordered List of Classes (Top 20) - Zenodo

Rank	ISIC Primary Class	Count
1	Scientific research and development	5
2	Human health activities	2
3	Computer programming, consultancy and related activities	2
4	Gambling and betting activities	1
5	Residential care activities	1
6	Education	1
7	Other professional, scientific and technical activities	1
8	Architectural and engineering activities; technical testing and analysis	1
9	Legal and accounting activities	1
10	Information service activities	1
11	Programming and broadcasting activities	1
12	Warehousing and support activities for transportation	1
13	Manufacture of other transport equipment	1
14	Printing and reproduction of recorded media	1
15	Manufacture of textiles	1
16	Extraction of crude petroleum and natural gas	1

Table 2: Rank-Ordered ISIC Primary Classes - Zenodo

c. Comments on Findings

22 of 22 QD/QDA-eligible Zenodo projects received a primary ISIC class, spread across 16 distinct divisions. The most common class is "Scientific research and development" at 5 projects (23% of the classified set) - the single most frequent class, though on a small base. 13 of the 16 classes found (81%) appear only once, which points to a long tail rather than a small number of dominant categories.

Classification confidence (cosine similarity) ranged 0.130-0.467, averaging 0.266 across 22 classified projects. 4 of 22 (18%) scored below 0.20 and should be treated as provisional rather than settled - the ISIC label is the model's best guess, not a confident match, for those projects specifically.

2. Repository: Harvard Dataverse

a. Histogram of Primary Classes Identified

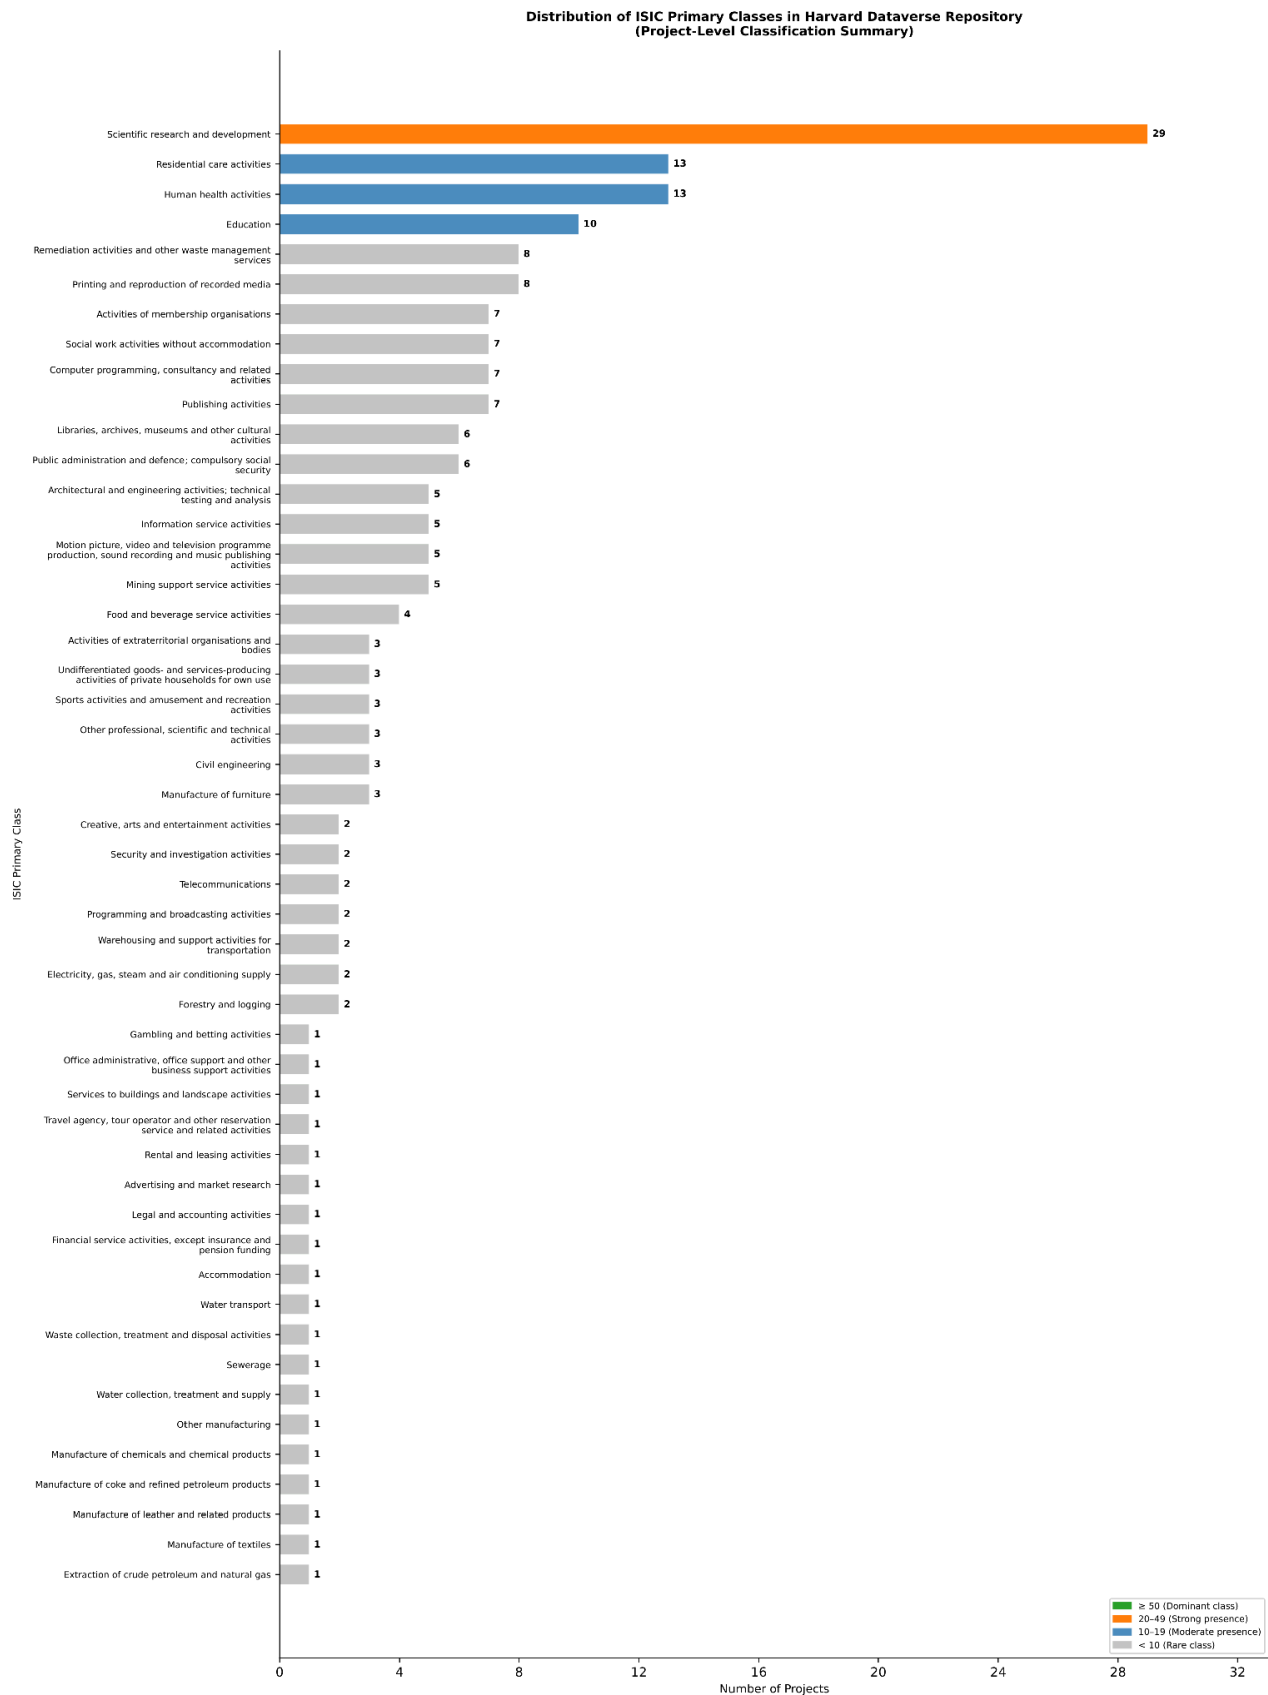

Figure 2: Histogram of Primary ISIC Classes in Harvard Dataverse Repository

b. Rank-Ordered List of Classes

Rank-Ordered List of Classes (Top 20) - Harvard Dataverse

Rank	ISIC Primary Class	Count
1	Scientific research and development	29
2	Residential care activities	13
3	Human health activities	13
4	Education	10
5	Remediation activities and other waste management services	8
6	Printing and reproduction of recorded media	8
7	Activities of membership organisations	7
8	Social work activities without accommodation	7
9	Computer programming, consultancy and related activities	7
10	Publishing activities	7
11	Libraries, archives, museums and other cultural activities	6
12	Public administration and defence; compulsory social security	6
13	Architectural and engineering activities; technical testing and analysis	5
14	Information service activities	5
15	Motion picture, video and television programme production, sound recording and music publishing activities	5
16	Mining support service activities	5
17	Food and beverage service activities	4
18	Activities of extraterritorial organisations and bodies	3
19	Undifferentiated goods- and services-producing activities of private households for own use	3
20	Sports activities and amusement and recreation activities	3

Table 3: Rank-Ordered ISIC Primary Classes - Harvard Dataverse

c. Comments on Findings

Comments on Findings - Harvard Dataverse

196 of 196 QD/QDA-eligible Harvard Dataverse projects received a primary ISIC class, spread across 49 distinct divisions. The most common class is "Scientific research and development" at 29 projects (15% of the classified set) - a strong presence (20-49 projects). 19 of the 49 classes found (39%) appear only once, which points to a long tail rather than a small number of dominant categories. Classification confidence (cosine similarity) ranged 0.077-0.485, averaging 0.274 across 196 classified projects. 29 of 196(15%) scored below 0.20 and should be treated as provisional rather than settled - the ISIC label is the model's best guess, not a confident match, for those projects specifically.
